📄 Summary

Strategic Leadership: Fractional CTO Advisory, Departmental Scaling (0 to 6 Teams), Strategic Roadmap Planning.

Technical Architecture: Event-Driven Microservices, Distributed Systems, CQRS & Clean Architecture.

Operational Excellence: SRE Maturity, Enterprise Compliance, SDLC Optimization.

Business Impact: Legacy Vendor Displacement, Cost Optimization, Stakeholder Management.

📁 Technical Skills

Languages & Frameworks: .NET/C#, Node.js, Rust, Python, React.

Data & Messaging: SQL Server, CosmosDB, PostgreSQL, Kafka, RabbitMQ, Redis.

AI: AI Augmented SDLC, Semantic Kernel, Vector DBs, RAG Architecture.

Infrastructure & Tools: Azure, AWS, Docker, Kubernetes, Terraform, OAuth2/Auth0, Github.

🎓 Education

2007-2012

Bachelors of Science, Computer Science and Mathematics

University of Illinois at Urbana-Champaign

📁 Experience

January 2023 - Current

Director of Software Engineering

Keller Postman

Directed the strategic technical vision and organizational scaling for an enterprise-grade platform, managing a department of 6 cross-functional teams and reporting directly to executive leadership.

Platform Transformation: Architected and launched a greenfield, event-driven microservices platform from the ground up, modernizing the firm's core technical infrastructure.

Strategic Cost Optimization: Orchestrated the replacement of legacy vendor software with proprietary internal solutions, resulting in **over \$2M+ in annual savings** while simultaneously establishing an in-house engineering culture.

Rapid Organizational Scaling: Scaled the engineering department from **0 to 6 full-cycle teams**, overseeing the full recruitment lifecycle, onboarding, and career development frameworks for all technical staff.

Product & Roadmap Governance: Partnered with stakeholders to define product strategy and multi-year roadmaps, aligning engineering direction with high-level business objectives.

February 2020 - December 2023

Principal Software Engineer

Seismic Software

Directed global engineering efforts to modernize legacy architectures and unify cross-functional development standards, driving systemic efficiency and high-scale reliability.

Organizational Standardization: Architected the "Seismic-protocol," a unified development framework that eliminated cross-team integration friction and accelerated feature velocity across all global teams.

Architectural Modernization: Led the strategic migration from a monolith/microservice hybrid to a fully decoupled, **event-driven architecture**, significantly increasing system elasticity and developer autonomy.

High-Scale Operational Excellence: Engineered a scalable document rendition system processing **100k+ daily uploads**, integrating SRE principles and automated SLO/SLA monitoring to ensure reliability at peak enterprise volumes.

October 2017 - February 2020

Engineering Lead

Donnelley Financial Solutions

Built and scaled the initial engineering department from inception, establishing Agile workflows and a high-coverage automated testing culture. Architected scalable microservices using **CQRS and Clean Architecture** to optimize performance, while overseeing full-stack initiatives in high-concurrency databases and **OAuth2 security**. Mentored junior talent into high-performing contributors while ensuring enterprise-grade architectural standards.

May 2012 - October 2017

Software Consultant

Echelon Consulting, L.L.C.

Orchestrated full-cycle delivery for diverse clients, spearheading the firm's **Azure cloud migration** and establishing enterprise standards for **CI/CD, unit testing, and scalable architecture**. Collaborated with stakeholders to translate complex requirements into high-quality, cloud-native deliverables.
